

# Developing an IoT-Based Multi-Sensor System for Real- Time Fire Detection and Spatial Analysis to Improve Campus Safety

*3<sup>rd</sup> April 2025 | Thursday*

*Vila Galé Porto Hotel, Porto, Portugal*

**Khairul Nizam Abdul Maulud**, Sarah Shahrudin,  
Syed Ahmad Fadhli Syed Abdul Rahman, Adi Irfan Che Ani

*Department of Civil Engineering, Faculty of Engineering & Built Environment,  
Universiti Kebangsaan Malaysia, 43600 UKM Bangi, Selangor, Malaysia*

# PRESENTATION OUTLINE

## 1 INTRODUCTION TO UNIVERSITI KEBANGSAAN MALAYSIA

## 2 INTRODUCTION TO GEOSPATIAL APPLICATION IN UKM

3

### PROBLEM STATEMENT

4

### RESEARCH OBJECTIVES

5

### RESEARCH METHODOLOGY

6

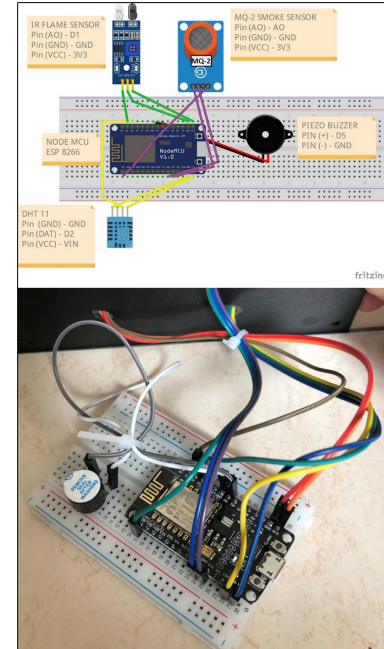

### FINDINGS

7

### DISCUSSION

8

### CONCLUSION

Universiti Kebangsaan Malaysia (UKM) celebrates 55<sup>th</sup> year of establishment this year. UKM is identified as a Research University by the Government of Malaysia in 2007 (Under RMK 2006-2010).

# About Us

## VISION

UKM is committed to be ahead of society and time in leading the development of a learned, dynamic and moral society.

## MISSION

To be the learning centre of choice that promotes the sovereignty of Bahasa Melayu and internationalizes knowledge rooted in the National culture.

# Campus Location

**CAMPUS 1**

## SUSTAINABLE DEVELOPMENT GOALS

Graduate  
Employability

Income  
Generation

# Sustainability Strategic Plan Universiti Kebangsaan Malaysia 2030

"Universiti Kebangsaan Malaysia as Universiti Watan is committed to cultivating, practicing and socializing the aspirations of sustainable development by 2030 for the well-being of the nation based on the following principles:

- Prioritizing governance based on sustainable development.
- Encouraging teaching, learning and research based on sustainable development aspirations.
- Showcasing culture and practices that enhance sustainability
- Improving the quality of natural, physical and digital ecosystems
- Strengthening the individual and community well-being."

# Building Asset Management Application Ver 4.0

- ✓ **Display of basic building information at UKM such as the total number of buildings, total registered spaces, total floor area, and total assets with verified locations.**
- ✓ **Display of the location of each building at UKM (map view).**
- ✓ **Display of floor plans for each building.**
- ✓ **Display of detailed information for each selected space, including information on engineering assets within the space.**
- ✓ **Display of detailed information for each asset, such as category, system, sub-system, and component.**
- ✓ **Filtering of desired spaces, for example:**
  - ❖ **Total number of meeting rooms at UKM**
  - ❖ **Total number of disabled-friendly (OKU) toilets at UKM**
  - ❖ **Filter of total assets in the Chancellery building**

## Developing an IoT-Based Multi-Sensor System for Real- Time Fire Detection and Spatial Analysis to Improve Campus Safety

# 1 - PROBLEM STATEMENT

## WHY

Hazardous incidents on campus grounds

- MOHE, 2021 reports - 589 hazardous incidents
- Primary limitations of the traditional fire alarm system

## WHY

Capabilities and limitations of the existing and conventional fire alarm systems

## WHAT?

Contributing factor led to fire incidents on campus

## WHAT?

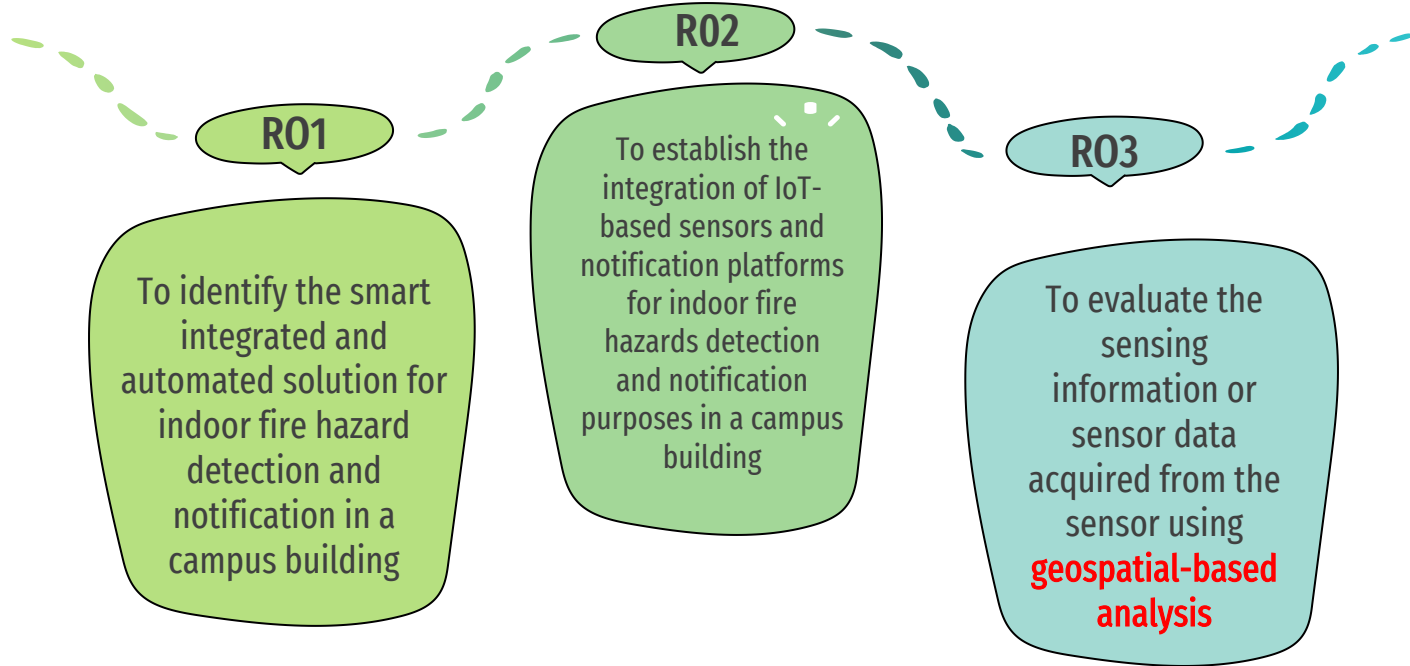

Current fire safety efforts in Malaysia's campus buildings and smart campus elements related to fire safety

## HOW

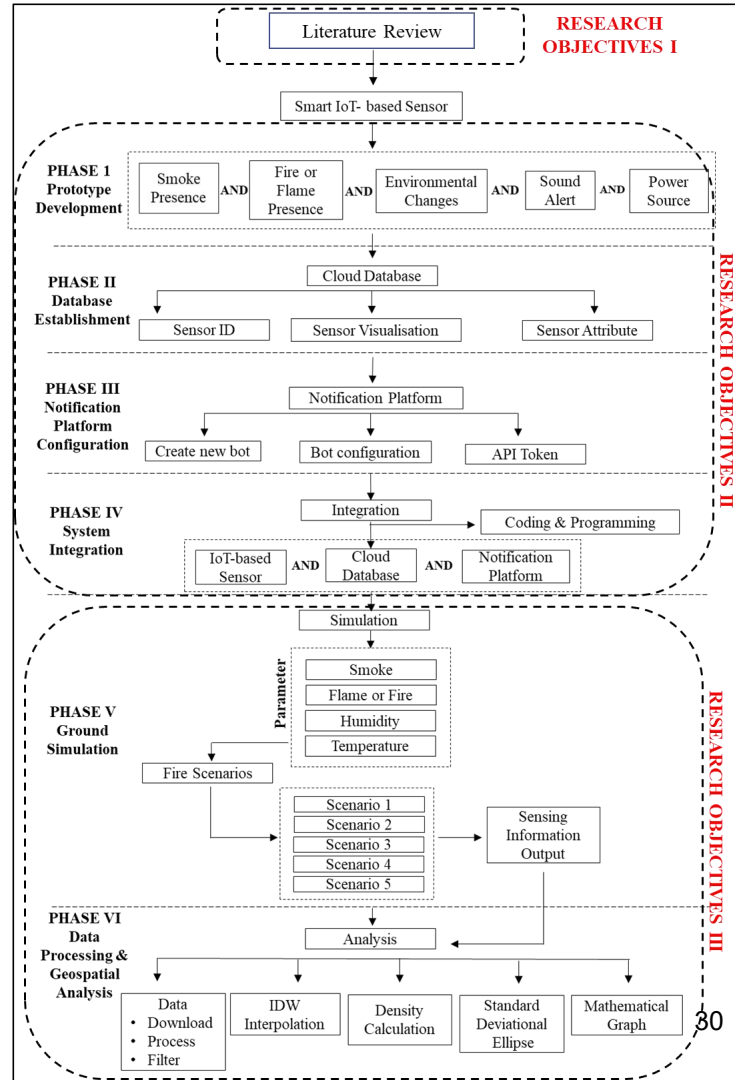

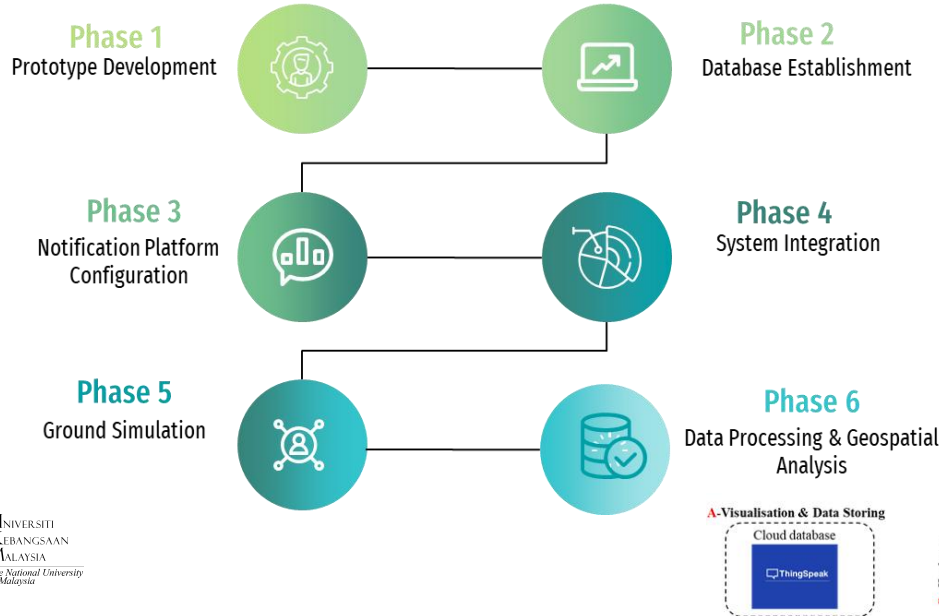

Proposed solutions and expanding the idea

## 2 - RESEARCH OBJECTIVES

# 3 - RESEARCH METHODOLOGY

This research involves a **systematic study** and is **structured into six phases**, each of which aligns with and addresses all three research objectives.

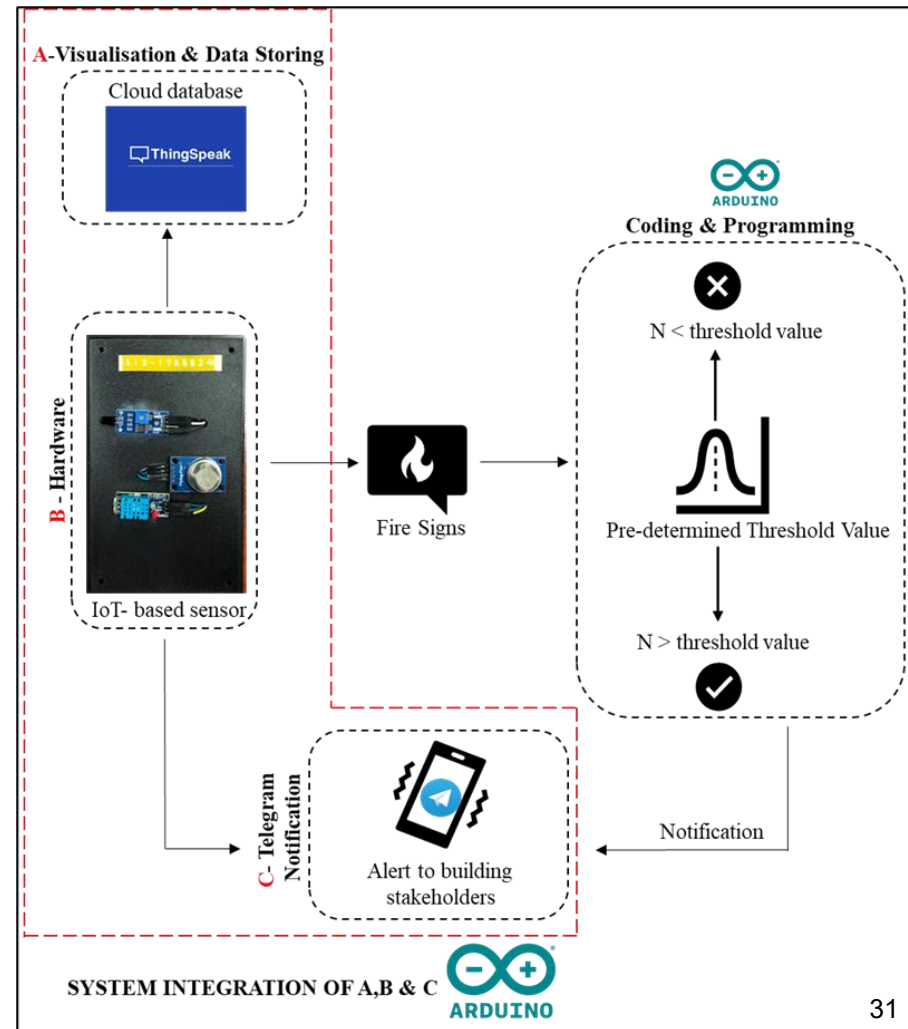

# 4 - FINDINGS

Research Findings for RO 1 = Proposed system architecture

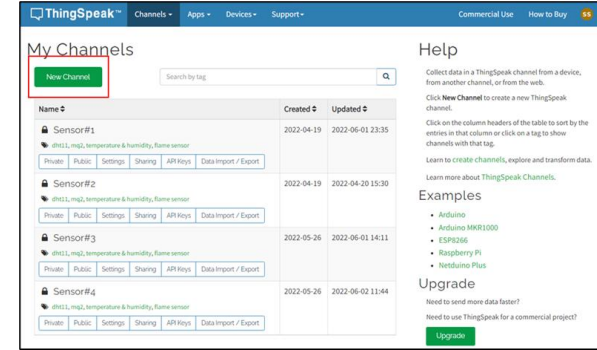

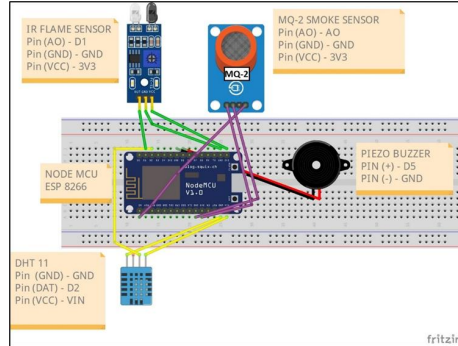

**RESEARCH OBJECTIVES I**

S15_1768136	Laluan	030
S16_1768137	Laluan	019
S17_1771864	Ruang Pejabat Am	014

Ground Simulation	Probability Source of Fire and Smoke Ignition	Explanation	Time
Simulation 1	AHU or Switch Room #Sensor S14_1768135	The central air conditioning system relies on the air handling unit (AHU) as its central component. At the same time, the switch room houses a collection of electrical equipment responsible for managing and safeguarding electrical circuits. Due to the nature of the room and the presence of electrical items, the likelihood of a fire starting in this room is higher.	10:29am to 11:01am
Simulation 2	Bilik Pentadbiran #Sensor S9_1761318	Typically, Bilik Pentadbiran is used for managing many documents and storing many paper-based products. Consequently, the risk of fire spreading rapidly is heightened due to combustible materials in the room.	11:00am to 11:30am
Simulation 3	Makmal ICT 1 #Sensor S12_1765624	The Makmal ICT is designed to provide students with easy access to computers, with numerous sets available to accommodate a sizable number of students. However, as computers are electrical devices, fire incidents are at risk. Moreover, the cables and other ICT peripherals used in the lab are made of combustible materials, further increasing the likelihood of fire incidents.	11:31am to 12:00am
Simulation 4	Bilik Pantri #Sensor S5_1756083	Bilik Pantri serves as a designated area for staff and students to have their meals, similar to a kitchen. It is equipped with basic cooking utensils and includes electrical appliances like refrigerators. As with any electrical device, the presence of these appliances in the room increases the risk of fire hazards due to their combustible materials.	12:01 noon to 12:30 noon
Simulation 5	Ruang Pejabat Am #Sensor S4_1748095	Ruang Pejabat Am is a new extension to the existing building, originally constructed with a smaller size and capacity. As a result, providing additional space or area to the building requires more electrical power sources. Although the extra power source might have been meticulously calculated and considered sufficient for the entire building's usage, the probability of a power trip due to an insufficient power supply could pose a fire hazard and increase the fire risk.	12:30 noon to 1.00pm

5	0.000089	0.000043	118.2

Sensor directional pattern using Standard Deviation Ellipse (SDE) analysis

SDE: measuring the trend for a set of points or areas to calculate the standard distance separately in the x-, y- and z-directions

## 5 -DISCUSSION

Based on findings obtained from the study, it can be observed that:

This research has confirmed the effectiveness of the MQ2 smoke sensor, DHT11 sensor, ThingSpeak, and Telegram.

Smoke values from the raw and estimation methods were almost proportional to each other.

Slight differences were observed in the size of the smoke ellipse, but they were not significant for this study. This suggests that the ellipse is a suitable representation of the data for longer durations

The density value indicates the sensor's smoke detection capability, which may vary based on its abilities.

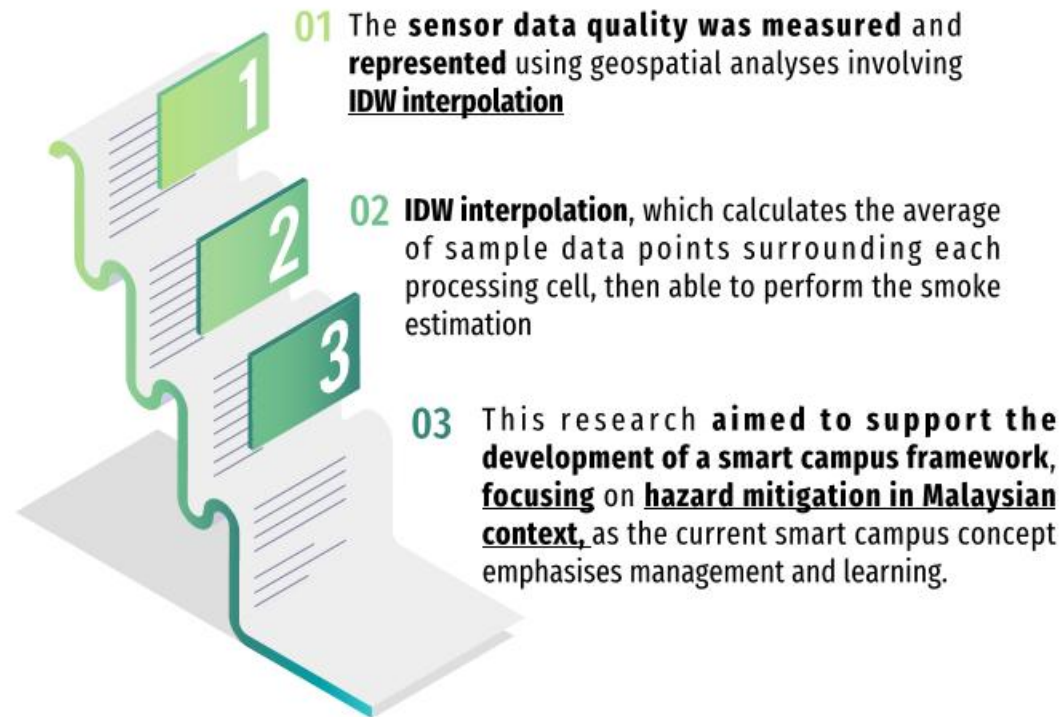

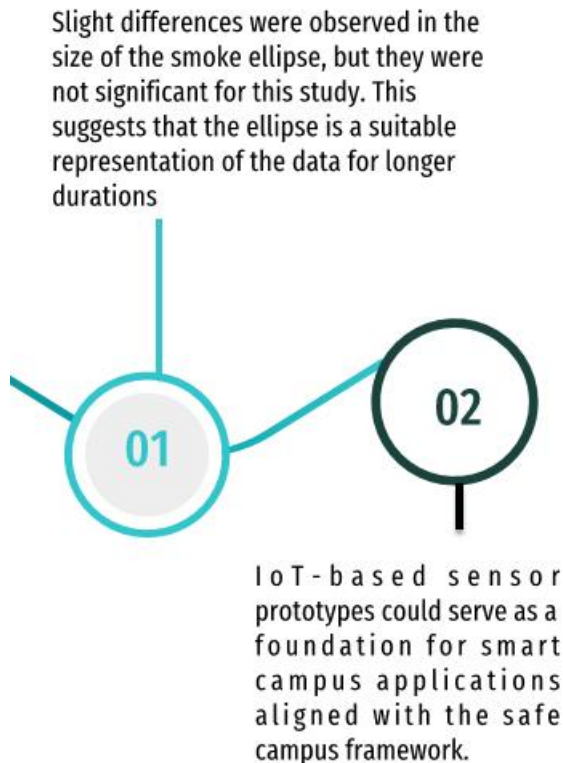

IoT - based sensor prototypes could serve as a foundation for smart campus applications aligned with the safe campus framework.

The study reveals inconsistency in energy sources, indicating a specific investigation on the use of power banks and more stable sources can be conducted.

Sensor performance was tested via functionality test, results were within the datasheet range.

# 5 -DISCUSSION &CONCLUSION

Based on findings obtained from the study,  
it can be observed that:

# Thank You
